— PROFILE —

I graduated from the Oslo School of Architecture- and Design where I received my diploma from the Institute of Form-, Theory and History.

My current position is with the "Ground-lab" team in A-lab architects, specializing in urban planning- and transformation projects.

I have completed several rehab/ reuse and urban strategy projects with a focus on adapting to the historic, cultural, social, economic and environmental context. I enjoy finding solutions to develop buildings and urban areas in a sustainable way, always aiming to give added qualities back to the community.

I have ample experience of all building phases of a project from sketch- to detailing, and have worked both as a project member and a project manager during my time with the company.

I have good communication and presentation skills and enjoy working in multidisciplinary teams.
